## Vol.14 WHEEL CATALOG

LEARN MORE

BC FORGED is a brand focused on seamlessly integrating timeless design with innovative technical details and superior manufacturing.

[www.bcforged.com.tw](http://www.bcforged.com.tw)

# ABOUT **BC**

BC, Taiwan Bor-Chuann Enterprise Co., Ltd, is the leading manufacturer of high performance shock absorbers in Taiwan. Since its establishment in 1999, BC has focused its efforts on developing, designing and manufacturing high performance shock absorbers.

BC, Taiwan Bor-Chuann started to promote its exclusively branded products, the BC Coilover Kit, which made its debut in 2003, and the sales volume of the BC Coilovers has grown impressively, consolidating its leading position in manufacturing shock absorbers in Taiwan.

BC Forged Wheels provide custom made wheels specific for your vehicles. All the wheels are using aerospace grade Forged 6061-T6 Aluminium, then CNC machined in highest precision and perfection, in order to achieve the best balance for strength and light weight. There are many options available to form your own personalized wheels that suit your beloved vehicles.

## 8000t FORGED MACHINE

BC Forged Wheels provide custom made wheels specific for your vehicles. All the wheels are using aerospace grade Forged 6061-T6 Aluminium, then CNC machined in highest precision and perfection, in order to achieve the best balance for strength and light weight. There are many options available to form your own personalized wheels that suit your beloved vehicles.

HCL10 HCL20

BC Forged monoblock wheels are machined from only the highest quality forged 6061-T6 aluminum creating a wheel that is not only strong but stiff and lightweight.

**AVAILABLE FINISHES**

**OPTIONAL 1**

**OPTIONAL 2**

※ The latest updates please refer to our official website.

**CENTER CAP OPTIONS**

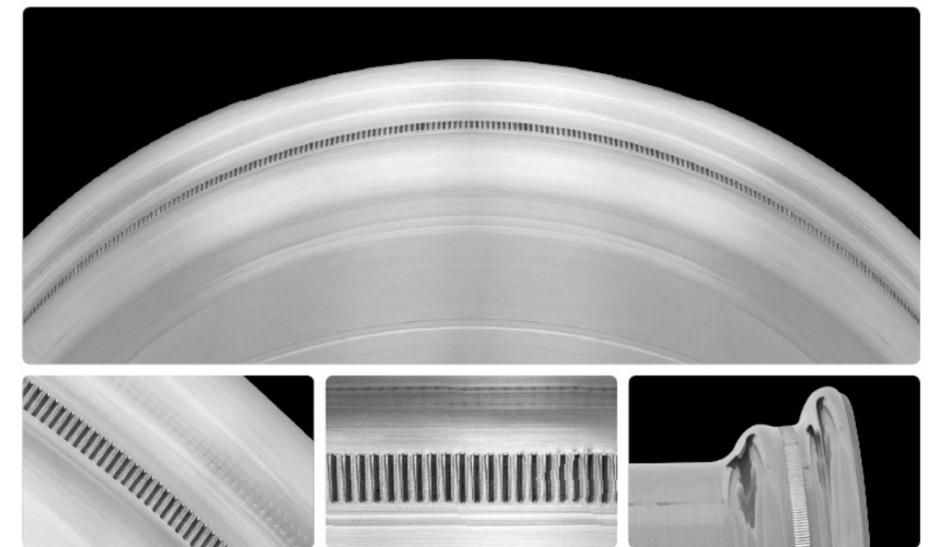

**POLISH FINISH (FOR RIM ONLY)**

The colors on the catalog are for reference only. Please refer to the BC color swatch for actual colors.

**ANTI-SLIP KNURLING**

Suggest : Race cars and high horsepower cars. Aim to increase traction between wheel rim and tire to reduce the possibility of tire moving around the surface of the wheel rim.
